

Locate File for Install Update Help

Use this dialog box to locate a configuration file to be updated when new models or products are installed in the library. By default, the Admin tool updates the configuration file in your \$LMC_HOME/data directory.

You can control the following functions when locating a configuration file:

- **Filter**—file name or file extension to be used when searching for the configuration file.
- **Directories**—list of directories to select when searching for files specified in the Filter field.
- **Files**—list of files that meet criteria in the Filter field.
- **Selection**—path name for the configuration file.

SmartModel Library users who want more information about configuration files can refer to the *SmartModel Library Administrator's Manual*. If you are running the Admin tool off the CD-ROM, [click here](#). If you are using the network-installed Admin tool, [click here](#).
