

## Select Platforms for Installation Help

Use this dialog box to select a platform and EDAV packages for installation.

This dialog box has the following fields:

- **Header information**—source and destination directories for installed models/products, and the number of models/products to be installed.
- **Platforms**—platform options, each with a check box button; select one or more platforms.
- **Configuration File**—for each platform, the path to the configuration file to be updated when the models or products are installed.
- **Browse**—button that brings up the Locate Media dialog box to help you locate the configuration file you want to update.
- **EDAV Packages**—simulator options, each with a check box button; select one or more packages.
- **Install**—button to start installation of models or products.

SmartModel Library users who want more information about installing models can refer to the *SmartModel Library Administrator's Manual*. If you are running the Admin tool off the CD-ROM, [click here](#). If you are using the network-installed Admin tool, [click here](#).
