

Set Library Directory Help

Use this dialog box to specify the library (LMC_HOME tree) on which you want to operate. The default is the location indicated by your \$LMC_HOME variable.

To open a library, follow these steps:

1. In the Name text field, type the name of your library install directory.
2. Click on the OK button. The dialog box closes and the directory name appears in the status area.

SmartModel Library users who want more information about using the Admin tool can refer to the *SmartModel Library Administrator's Manual*. If you are running the Admin tool off the CD-ROM, [click here](#). If you are using the network-installed Admin tool, [click here](#).
