## Select Models to Install Help

This dialog box contains the following fields:

- **Available Items list box**—Lists the names and version numbers of models or timing-versions available for installing from the CD-ROM or other source. You can toggle the display between models and timing-versions.

- **Selected Items list box**—Lists names and version numbers of models you have selected for installing. This field is blank when the dialog box first opens. As you select from the Available Items list, models are added to the Models to Install list. If you select a timing-version to add to this list, the corresponding model is added, so that the list always contains just model names.

- **Filter button**—Opens the Model Filters dialog box to assist you in specifying a subset of models to select for installing.

- **Add All button**—Adds to the Models to Install list all models on the Available Items list.

- **Add button**—Adds to the Models to Install list those models selected from the Available Items list.

- **Remove button**—Removes selected models from the Models to Install list.

- **Remove All button**—Removes all models from the Models to Install list.

- **Read List button**—Opens the Read List dialog box, so that you can select a file from which to read in a list of models.

**Select Models to Install Help**

- **Write List button**—Opens the Write List dialog box, so that you can write to a file the list of models you have selected for installing.

- **Model Name/TimVer Name button**—Toggles the display of the Available Items list between model names and timing-version names.

SmartModel Library users who want more information about installing models can refer to the *SmartModel Library Administrator's Manual.* If you are running the Admin tool off the CD-ROM, click here. If you are using the network-installed Admin tool, click here.
