Read/Write List Help

Use the Read List dialog box to specify a file that contains a list of models to install or purge. Use the Write List dialog box to specify a file that contains a list of models you have installed or purged. Model lists you save can be read in using the Read List function.

You can control the following functions when specifying the name of a model list file:

- **Filter**—file name or file extension to be used when searching for the model list file.

- **Directories**—list of directories to select when searching for a model list file.

- **Files**—list of model list files that meet criteria in the Filter field.

- **Selection**—path name for the model list file.

SmartModel Library users who want more information about installing or purging models can refer to the *SmartModel Library Administrator's Manual*:

- If you are running the Admin tool off the CD-ROM, click on one of these links for information about installing or purging models.

- If you are using the network-installed Admin tool, click on one of these links for information about installing or purging models.
