Select Models to Purge Help

Use this dialog box to purge older model versions from $LMC_HOME. This dialog box has the following fields:

- **Items Available list box**—Lists the names and version numbers of models available for purge.

- **Models to Purge list box**—Lists names and version numbers of models you have selected for purging. This field is blank when the dialog box first opens. As you select from the Items Available list, models are added to the Models to Purge list. If you select a timing-version to add to this list, the corresponding model is added, so that the list always contains just model names.

- **Filter button**—Opens the Model Filters dialog box to assist you in specifying a subset of models to select for purging.

- **Add All button**—Adds to the Models to Purge list all models on the Available Items list.

- **Add button**—Adds to the Models to Purge list those models selected from the Available Items list.

- **Remove button**—Removes selected models from the Models to Purge list.

- **Remove All button**—Removes all models from the Models to Purge list.

Select Models to Purge Help

- **Read List button**—Opens the Read List dialog box, so that you can select a file from which to read in a list of models. **Write List button**— Opens the Write List dialog box, so that you can write to a file the list of models you have selected for purging.

- **Purge button**—When the Models to Purge list box contains all of the models you want to purge, click on this button to start the purge.

SmartModel Library users who want more information about purging models can refer to the *SmartModel Library Administrator's Manual.* If you are running the Admin tool off the CD-ROM, click here. If you are using the network-installed Admin tool, click here.
