Model Detail Help

Use this dialog box to get information about a specific model, such as its configuration file, installed versions, timing versions, and installed platforms.

Initially, the list of installed versions in the Installed Versions field shows the top version selected. The Timing Versions and Installed Platforms list boxes show information specific to the installed version selected.

To display timing versions and platforms for another installed version, use the Installed Versions list box to select another version. The version numbers at the top of the other two list boxes change to the selected version number. The lists contain the timing versions and installed platforms for the selected version.

SmartModel Library users who want more information about models in general can refer to the *SmartModel Library User's Manual*.
