Install From Help

Use this dialog box to specify the source (CD-ROM or FTP) for the SmartModel Library models or products that you want to install.

If you are installing from a physical CD, enter the mount point for the CD-ROM drive you are using.

If you are installing from an FTP shipment, be sure to unzip the image as explained in the e-mail that you received with your order. The unzip process produces a CD image that you install by using the "Browse" button on the "Install From" dialog box to navigate to the unzipped CD image.

SmartModel Library users who want more information about installing models can refer to the *SmartModel Library Administrator's Manual.* If you are running the Admin tool off the CD-ROM, click here. If you are using the network-installed Admin tool, click here.
