Select Platform for Purge/Check Help

The "Select Platform for Purge" or the "Select Platform for Check" dialog boxes are similar, and have these fields:

- **Platform list**—Lists platform options, each with a radio button. The platform is selected when its radio button is selected. You can select only one platform.

- **Configuration File text field**—Contains the path to the configuration file to be updated when the models are purged; or the configuration file to be used for comparison when the models are checked.

- **Browse button**—Opens the Locate File for Purge Update or Locate File to Check dialog box to assist you in locating the configuration file.

- **Continue button**—Opens the Select Models to Purge dialog box or the Library Report dialog box so that you can choose models to purge or select one of the Library Report options.

- **Number of versions to keep text field**—Use this field to specify the number of model versions to protect from the purge operation. Legal values are 2 through 99 and the default is 3, which protects the 3 most recent version of the model from the purge.

SmartModel Library users who want more information about purging models can refer to the *SmartModel Library Administrator's Manual.* If you are running the Admin tool off the CD-ROM, click here. If you are using the network-installed Admin tool, click here.
