SPIGen (Windows XP)
Version 5.0.8

=====

Mar 16, 2012

WARNING: This version of the software is for Windows XP ONLY!
It does NOT support Windows Vista or Windows 7.

In order to install this software, you will need to log in as the administrator.
Once the program has been installed, any user can use it (they don't need administrator privileges).

This software is not supported. Use at your own risk.

For Installation Information please read the README.1ST.pdf file in this .zip file.

Version History

- 5.0.8 +Added support for MC33909, MC33903D and MC33903S devices.
- 5.0.7 +Fixed a bug in the SPI dongle code that prevented certain SPI commands from being sent.
+Made user interface changes to clarify the saving of batch commands.
+Fixed a bug that caused all batch commands to be erased when configuration was modified.
- 5.0.6 +Fixed parallel port functionality.
+Added the ability to specify a configuration file on the command line.
+Added support for MC33902, MC33905 and MC33742 devices.
Tabs for these devices are enabled when the config file contains the line "[Enable33xxx]",1 where xxx is replaced with 902, 905 or 742.
- 5.0.5 +Made slight changes to accomodate MC33912 mode
- 5.0.4 +Added support for USB SPI Dongle In Circuit Programming via USB
- 5.0.3 +Added support for special MC33912 screens when config file used contains the line "[Enable33912]",1
- 5.0.2 +Fixed problem with certain laptops that couldn't run SPIGen without a parallel port
- 5.0.1 +Fixed one message latency in returning SPI messages
- 5.0.0 +Added support for USB
+Update NTPORT library version 2.7

- 4.0.0
 - +Increased the maximum number of bits from 40 to 160
 - +Clicking "Stop" will now allow entire batch to complete
 - +Extra pins can be toggled with a single click
 - +Made button background colors transparent
 - +Added "Done Waiting" comment to session log after wait
 - +Fixed "Disable Log" feature so it doesn't disable extra pins
 - +Quick Command "Delete" also deletes the command from batches
 - +The "Save before Exit?" nag screen was made smarter
 - +Replaced Motorola icons with Freescale Icons
 - +Updated the parallel port driver, should detect better now
- 3.0.4
 - +Fixed SPIType bug (cancel now does the right thing)
 - +Fixed LPT Address checkboxes so only one can be checked
- 3.0.3
 - +Fixed Continuous Send bug (errors now trigger "Stop")
 - +Fixed bug when using pin 2 as "extra pin"
- 3.0.2
 - +Fixed DI and DO bug ("Cancel" did funny things to them)
- 3.0.1
 - +Added "(Non-Standard)" labels to SPI types 5-8
 - +Fixed Continuous Send bug (most buttons now trigger "Stop")
 - +Fixed extra pin bug (was disabled by "Cancel")
 - +Improved parsing of hex commands (won't allow letters > f)
- 3.0.0
 - +Bad port detection fixed
 - +Extra pins feature added
 - +Additional SPI Types added
 - +NT/2000/XP compatibility added
 - +Config Options consolidated into one form
 - +Hex Feature Added
 - +Wait Feature Added
 - +Added the ability to overwrite Quick Commands
 - +Batch feature added
 - +Help File considerably expanded
- 2.1.0
 - +Fixed bug when trying to save a command after opening file
- 2.0.2
 - +Fixed "Cancel" buttons so they retain previous selections
 - +Double-click in Quick Commands now means "Send Once"
 - +Changed SPI single word labels
 - +Updated the Help file
- 2.0.1
 - +Fixed data out (DO) bug, always reported x's.
 - +Updated Help file
- 2.0.0
 - +First release to the world.
 - +Help file added
- 1.0.3
 - + "Save before quitting?" prompt made smarter.
 - + "Configure will destroy Quick Commands!" prompt added.
 - + Smart Enter key saves and sends Quick Commands
 - + Pictures added to choose SPI types.
- 1.0.2
 - +Continuous Send Log bugs fixed.
 - +Minor changes to the look of the program.
- 1.0.1
 - +Program overhauled to support max of 40 bit words.
- 1.0.0
 - +And there was light.
